

10-step process to assist your business improve water efficiency

Step 1	Engage all staff and senior management in your water management initiative.
Step 2	Identify how much your business is paying in water and wastewater charges and, also what related hidden charges your business is facing.
Step 3	Develop a water balance for your business attempting to quantify >90% of water use.
Step 4	Use the information in your water balance to design a monitoring and targeting (M&T) system.
Step 5	Use your water balance and M&T system to identify improvement actions to eliminate or reduce water use and minimise sewerage and trade effluent generation (targeting volume and strength in trade effluent).
Step 6	Identify good practice techniques that will allow the improvement actions to be realised.
Step 7	Prepare a Water Management Action Plan (WMAP) to summarise and prioritise improvement actions including a business case for each action then <u>implement them</u> as appropriate for your business. Regularly update your WMAP as new improvement actions are identified.
Step 8	Review and evaluate the <u>actual</u> improvement action benefits achieved versus those forecasted in the business case.
Step 9	Communicate success to staff, senior management, and your supply chain to maintain engagement in the initiative.
Step 10	Continually improve by returning to Step 1 on at least a six month basis.
